- **Target range PTT 42-70**
- If PTT is <28: Give a 0.2mg/kg bolus. Increase infusion rate by 30%. Repeat PTT 4hrs after the rate change.
- If PTT is 28-41.9: Increase infusion rate by 20%. Repeat PTT 4hrs after the rate change.
- If PTT is 42-70: Continue infusion at same rate. Repeat PTT in 4hrs. After 2 consecutive measurements in this range, change to QAM PTT checks.
- If PTT is 70.1-84: Stop infusion for 1hr, then decrease infusion rate by 25%. Repeat PTT 4hrs after restarting the infusion.
- If PTT is >84: Stop infusion for 2hrs, then decrease infusion rate by 50%. Repeat PTT 4hrs after restarting the infusion.

Date	Time	PTT result	Bolus-dose given and time	Lepirudin stopped (time)	Lepirudin restarted (time)	Infusion-Dose	Infusion-Rate and time started
